

1 **Statement of Principles Regarding**
2 **Property and Casualty**
3 **Insurance Ratemaking**

4 (Adopted by the Board of Directors of the CAS May 1988)

5 The purpose of this Statement is to identify and describe principles applicable to the
6 determination and review of property and casualty insurance rates. The principles in this
7 Statement are limited to that portion of the ratemaking process involving the estimation of costs
8 associated with the transfer of risk. This Statement consists of four parts:

9 I. Definitions

10 II. Principles

11 III. Considerations

12 IV. Conclusion

13 The principles contained in this Statement provide the foundation for the development of
14 actuarial procedures and standards of practice. It is important that proper actuarial procedures
15 be employed to derive rates that protect the insurance system's financial soundness and promote
16 equity and availability for insurance consumers.

17 Although this Statement addresses property and casualty insurance ratemaking, the
18 principles contained in this Statement apply to other risk transfer mechanisms.

19 I. Definitions

20 Ratemaking is the process of establishing rates used in insurance or other risk transfer
21 mechanisms. This process involves a number of considerations including marketing goals,
22 competition and legal restrictions to the extent they affect the estimation of future costs associated
23 with the transfer of risk. This Statement is limited to principles applicable to the estimation of these
24 costs. Such costs include claims, claim settlement expenses, operational and administrative
25 expenses, and the cost of capital. Summary descriptions of these costs are as follows:

- 26 • Incurred losses are the cost of claims insured.
- 27 • Allocated loss adjustment expenses are claims settlement costs directly assignable to
28 specific claims.
- 29 • Unallocated loss adjustment expenses are all costs associated with the claim settlement
30 function not directly assignable to specific claims.
- 31 • Commission and brokerage expenses are compensation to agents and brokers.
- 32 • Other acquisition expenses are all costs, except commission and brokerage, associated
33 with the acquisition of business.
- 34 • Taxes, licenses and fees are all taxes and miscellaneous fees except federal income taxes.
- 35 • Policyholder dividends are a non-guaranteed return of premium charged to operations as
36 an expense.
- 37 • General administrative expenses are all other operational and administrative costs.
- 38 • The underwriting profit and contingency provisions are the amounts that, when considered
39 with net investment and other income, provide an appropriate total after-tax return.

40 II. Principles

41 Ratemaking is prospective because the property and casualty insurance rate must be
42 developed prior to the transfer of risk.

43 Principle 1: A rate is an estimate of the expected value of future costs.

44 Ratemaking should provide for all costs so that the insurance system is financially sound.

45 Principle 2: A rate provides for all costs associated with the transfer of risk.

46 Ratemaking should provide for the costs of an individual risk transfer so that equity among
47 insureds is maintained. When the experience of an individual risk does not provide a credible
48 basis for estimating these costs, it is appropriate to consider the aggregate experience of similar
49 risks. A rate estimated from such experience is an estimate of the costs of the risk transfer for
50 each individual in the class.

51 Principle 3: A rate provides for the costs associated with an individual risk transfer.

52 Ratemaking produces cost estimates that are actuarially sound if the estimation is based on
53 Principles 1, 2, and 3. Such rates comply with four criteria commonly used by actuaries:
54 reasonable, not excessive, not inadequate, and not unfairly discriminatory.

55 Principle 4: A rate is reasonable and not excessive, inadequate, or unfairly discriminatory
56 if it is an actuarially sound estimate of the expected value of all future costs associated with an
57 individual risk transfer.

58 III. Considerations

59 A number of ratemaking methodologies have been established by precedent or common
60 usage within the actuarial profession. Since it is desirable to encourage experimentation and
61 innovation in ratemaking, the actuary need not be completely bound by these precedents.
62 Regardless of the ratemaking methodology utilized, the material assumptions should be
63 documented and available for disclosure. While no ratemaking methodology is appropriate in all
64 cases, a number of considerations commonly apply. Some of these considerations are listed
65 below with summary descriptions. These considerations are intended to provide a foundation
66 for the development of actuarial procedures and standards of practice.

67 **Exposure Unit**

68 The determination of an appropriate exposure unit or premium basis is essential. It is desirable
69 that the exposure unit vary with the hazard and be practical and verifiable.

70 **Data**

71 Historical premium, exposure, loss and expense experience is usually the starting point of
72 ratemaking. This experience is relevant if it provides a basis for developing a reasonable
73 indication of the future. Other relevant data may supplement historical experience. These other
74 data may be external to the company or to the insurance industry and may indicate the general
75 direction of trends in insurance claim costs, claim frequencies, expenses and premiums.

76 **Organization of Data**

77 There are several acceptable methods of organizing data including calendar year, accident year,
78 report year and policy year. Each presents certain advantages and disadvantages; but, if
79 handled properly, each may be used to produce rates. Data availability, clarity, simplicity, and
80 the nature of the insurance coverage affect the choice.

81 **Homogeneity**

82 Ratemaking accuracy often is improved by subdividing experience into groups exhibiting similar
83 characteristics. For a heterogeneous product, consideration should be given to
84 segregating the experience into more homogeneous groupings. Additionally, subdividing or
85 combining the data so as to minimize the distorting effects of operational or procedural changes
86 should be fully explored.

87 **Credibility**

88 Credibility is a measure of the predictive value that the actuary attaches to a particular
89 body of data. Credibility is increased by making groupings more homogeneous or by increasing
90 the size of the group analyzed. A group should be large enough to be statistically reliable.
91 Obtaining homogeneous groupings requires refinement and partitioning of the data. There is a
92 point at which partitioning divides data into groups too small to provide credible patterns. Each
93 situation requires balancing homogeneity and the volume of data.

94 **Loss Development**

95 When incurred losses and loss adjustment expenses are estimated, the development of
96 each should be considered. The determination of the expected loss development is subject to the
97 principles set forth in the Casualty Actuarial Society's Statement of Principles Regarding
98 Property and Casualty Loss and Loss Adjustment Expense Reserves.

99 **Trends**

100 Consideration should be given to past and prospective changes in claim costs, claim
101 frequencies, exposures, expenses and premiums.

102 **Catastrophes**

103 Consideration should be given to the impact of catastrophes on the experience and procedures
104 should be developed to include an allowance for the catastrophe exposure in the rate.

105 **Policy Provisions**

106 Consideration should be given to the effect of salvage and subrogation, coinsurance,
107 coverage limits, deductibles, coordination of benefits, second injury fund recoveries and other
108 policy provisions.

109 **Mix of Business**

110 Consideration should be given to distributional changes in deductibles, coverage
111 limitations or type of risks that may affect the frequency or severity of claims.

112 **Reinsurance**

113 Consideration should be given to the effect of reinsurance arrangements.

114 **Operational Changes**

115 Consideration should be given to operational changes such as changes in the underwriting
116 process, claim handling, case reserving and marketing practices that affect the continuity of the
117 experience.

118 **Other Influences**

119 The impact of external influences on the expected future experience should be considered.
120 Considerations include the judicial environment, regulatory and legislative changes, guaranty
121 funds, economic variable, and residual market mechanisms including subsidies of residual

122 market rate deficiencies.

123 **Classification Plans**

124 A properly defined classification plan enables the development of actuarially sound rates.

125 **Individual Risk Rating**

126 When an individual risk's experience is sufficiently credible, the premium for that risk
127 should be modified to reflect the individual experience. Consideration should be given to the
128 impact of individual risk rating plans on the overall experience.

129 **Risk**

130 The rate should include a charge for the risk of random variation from the expected costs. This
131 risk charge should be reflected in the determination of the appropriate total return consistent with
132 the cost of capital and, therefore, influences the underwriting profit provision. The rate should also
133 include a charge for any systematic variation of the estimated costs from the expected costs. This
134 charge should be reflected in the determination of the contingency provision.

135 **Investment and Other Income**

136 The contribution of net investment and other income should be considered.

137 **Actuarial Judgment**

138 Informed actuarial judgments can be used effectively in ratemaking. Such judgments may
139 be applied throughout the ratemaking process and should be documented and available for
140 disclosure.

141 IV. Conclusion

142 The actuary, by applying the ratemaking principles in this Statement, will derive an estimation
143 of the future costs associated with the transfer of risk. Other business considerations are also a part
144 of ratemaking. By interacting with professionals from various fields including underwriting,
145 marketing, law, claims, and finance, the actuary has a key role in the ratemaking process.
